

Flo-tech[®] Contour Visco^{NG}

Conforms to the shape
of the user's body

Yes, you can.

The Invacare **Flo-tech® Contour Visco^{NG}** cushion is an anatomically contoured 100% viscoelastic foam cushion. It provides excellent pressure redistribution properties to improve comfort and stabilise the pelvis. Its low-profile design promotes easy foot propulsion and enables access to lower tables.

Rear Radius

- ▶ Contoured radius provides additional support behind the pelvis for optimal pelvic positioning. The cushion radius can fit underneath the backrest upholstery or a contoured rigid back support, filling the gap normally seen when rear squared cut cushions are used. Maximizing the surface area of contact will improve pressure redistribution and skin protection

Waterfall front edge

- ▶ Provides maximum thigh support for improved leg positioning and pressure redistribution, without compromising the popliteal area of the knee joint. The waterfall front edge also accommodates those with tight hamstrings to allow foot positioning at 90 or less and enables foot propulsion

- ▶ The **Flo-tech® Contour Visco^{NG}** provides superior immersion and envelopment. When sitting on the cushion the user will feel the viscoelastic foam slowly adapting to their body shape, increasing the surface of contact, and thus redistributing pressure. The **Flo-tech® Contour Visco^{NG}** is available in a wide range of sizes and weight capacities, providing the best fit to the user. It includes 2 covers with 2 zippers, easy to remove for cleaning and maintenance. The covers are incontinence proof and bi-elastic to allow efficient immersion of the user body in the foam cushion. The non-slip base ensures that the cushion remains in place and the carry-handle allows easy transfer of the cushion from one surface to another.
