

Lejrelet

Positioning Cushions

Providing comfort, support

and pressure management

Lejrelet Tube 125

This bolstering cushion is 125 cm long, making it ideal for placing in front of the chest or in the back to create a comfortable and relaxing position. It can also be used to help support clients who cannot hold themselves upright in the side-lying position.

- > **For children and adults**
Provides comfort, tactile stimulation and positional stability.

- > **Chest & back support**
Ideal for placing in front of the chest or at the back in the side-lying position.

Lejrelet Tube 250

This full-body positioning bolster is ideal for creating comfortable and pressure relieving positions for clients or patients in bed. The cylinder-shaped bolstering cushion is 250 cm long, which means that it can support the body from head to toe all at once.

- > **Pressure-relieving foam granulate**
Moulds to the body for stability, comfort and effective pressure redistribution.

- > **Full-body support**
Supports the body from head to toe in one positioning aid.

Lejrelet Wedge

This wedge cushion is designed based on the anatomy of the human chest. This makes the support cushion particularly suited for placing in front of the client's chest or at their back.

- > **Anatomically shaped**
Designed to match the contour of the human chest for a natural fit.

- > **Dual-layer foam**
Firm core combined with a pressure-relieving surface for stability and comfort.

Lejrelet Pad High

This pressure-relieving positioning cushion is 15 cm high ensuring a neutral position of a client's hip and pelvis when one leg is placed on the pillow in the side-lying position. This helps eliminate any painful twists in the lower back, which are otherwise common in this position.

> **Neutral hip & pelvis position**
Helps eliminate painful lower back twists in the side-lying position.

> **Water-resistant cover**
Multi-stretch fabric is vapour-permeable and does not absorb liquids.

Lejrelet Pad Low

LEJRELET Pad Low is a lightweight and soft support cushion that can be shaped and moulded to suit many different situations.

> **Mouldable & versatile**
Roll, fold or use flat — adapts to any positioning need.

> **Protects bone protrusions**
Place between knees or feet to prevent pressure in the side-lying position.

Lejrelet Oval

LEJRELET Oval is one of the smallest positioning pillows on the market, which makes it ideal for providing that small, extra support that you often need when using larger positioning cushions. For instance, this might be as a lumbar support cushion, a knee abduction cushion or to support a paretic hand.

> **Micro-positioning**
Ideal as lumbar support, knee abduction cushion or hand support.

> **Doughnut shape on demand**
Foam granulate filling moulds to relieve pressure on ears, elbows and hands.

Lejrelet Set Without Tubes

This set contains three positioning cushions that can be combined to create comfortable patient positioning and improve work health and safety.

Lejrelet Set with Tube 125

This set of 5 different support cushions can be used to create unique and tailored positions for any patient or client. The set includes a leg support cushion, a long body bolster, a wedge, and two smaller positioning cushions.

Lejrelet Set with Tube 250

The five positioning cushions in this set can be combined to create everything from full-body positioning to small repositions and targeted pressure-relieving efforts. The set comes with a practical bag to easily store and carry the support cushions.
